

# C – Sequ

## *Development of LCA guidelines for the calculation of Carbon Sequestration for the cattle sector*

### Public Consultation

The C-Sequ project has been underway for two years in an effort to build a set of guidelines for use by the global cattle sector in calculating Carbon Sequestration at farm level using an LCA approach. The project engaged experts in the fields of Soil and LCA science to ensure the guidelines were scientifically robust and with the contribution of a wide range of stakeholders, pragmatic and practical.

In addition, the guidelines benefited from intelligence gathered from a number of different sources such as published papers; other related initiatives and importantly ensuring alignment with ISO and IPCC guidance.

These guidelines are now complete with the technical support of the consultancy Quantis, and the project partners are now seeking the input of a wide range of stakeholders to ensure the methodology is as robust as possible. Experts with knowledge on soil and LCA disciplines are encouraged to share their thoughts on the document through this public consultation period.

The public consultation will last for 6 weeks, finishing on December 9<sup>th</sup>, 2020 and will be coordinated by the International Dairy Federation. Please use the following link to download the C-Sequ draft document and review feedback template.

As the topic is complex and being the first attempt at any development of this nature, our technical specialists Quantis will conduct two webinars on November 10, 2020. These webinars will provide a detailed overview of the methodology and development process and will encourage feedback on the particularly challenging aspects. For those not able to attend the webinars at the set times, recordings will be available.

You must register for these webinars using the links provided below.

**08h00 CET 10/11/20 –**
